

# TOP 7 MISTAKES

Don't make these mistakes when  
you install ducted air conditioning

1

## Your air conditioner's capacity is too small for your home

---

When you are researching air conditioning systems or comparing quotes, make sure the air conditioner units you are reviewing have a similar Net Rated Capacity kW.

**cont'd >**

Without the appropriate kW capacity, an air conditioning system, especially in the extreme Australian climate, may not be able to adequately cool your home on a hot day.

At Quality Air, we give you a live heat load calculator with your quotation so you can be assured of the right kW requirements for your home.

2

## Your ducted air conditioning system doesn't run efficiently

---

There are two types of compressors within the outdoor unit of the air conditioner. The Fixed Speed Compressor or the Variable Speed (Inverter) Compressor.

**cont'd >**

The fixed speed compressor will constantly run at 100% of its capacity at full speed and stops and starts its motor to maintain the desired temperature. Whereas, an Inverter compressor, will vary and fluctuate its speed from 40-100%, in order to maintain a consistent temperature, this means it doesn't stop and start its motor and, as a result, is much more energy efficient.

3

## You decide on cooling only rather than reverse cycle

---

For a marginally extra cost or no cost at all your ducted air conditioning system will heat and cool, keeping you comfortable all year round.

4

## You are unable to personalise the airflow to each room

---

Ask about climate control systems, such as the MyAir or Zone 10. These components allow you to control how much airflow each room receives in precise 10% increments and you can even control the airflow via your iPhone or iPad.

5

## For peace of mind ask about total installation warranty

---

Your system equipment (the evaporator and condenser set) is covered with the manufacturer's warranty, generally about 5 years.

cont'd >

However, what about the installation components (such as, ducting, airflow vents, zone controls, wiring etc.)? All the equipment used to make the system fully operational. Make sure a substantial warranty is offered. We offer a 5 year total installation warranty\* on all parts and labour to ensure your system runs smoothly for you for many years to come.

\*Terms & Conditions apply.

6

## You need to save up first

---

Get it now with interest free finance\* that includes flexible payment options (weekly, fortnightly or monthly).

**[Read more about Once Credit interest free finance](#)**

\* Terms, conditions, fees charges & lending criteria apply. Finance provided by Once Credit Pty Limited ACN 112 319 632 t/a MyBuy, Australian Credit Licence 386 194.

7

## You opt to install split systems instead

---

While split systems definitely have their merit, if you are air conditioning more than 3 rooms, look into ducted air conditioning.

cont'd >

Ducted air conditioning is one of the most efficient ways to heat and most importantly, in our climate, cool your home. At the touch of a button, you can have different rooms heated or cooled accordingly and with new technology, you can even have different rooms set to different temperatures, all whilst maintaining the maximum in energy efficiency, all this with prices starting from only \$7500.
